

Scientific Computing and Data Science

Title	Scientific Computing and Data Science
Semester	F2024
Master programme in	Mathematical Bioscience / Physics and Scientific Modelling
Type of activity	Course
Teaching language	English
Study regulation	Read about the Master Programme and find the Study Regulations at ruc.dk Læs mere om uddannelsen og find din studieordning på ruc.dk

REGISTRATION AND STUDY ADMINISTRATIVE

	Sign up for study activities at stads selvbetjening within the announced registration period, as you can see on the Studyadministration homepage .
	When signing up for study activities, please be aware of potential conflicts between study activities or exam dates.
Registration	The planning of activities at Roskilde University is based on the recommended study programs which do not overlap. However, if you choose optional courses and/or study plans that goes beyond the recommended study programs, an overlap of lectures or exam dates may occur depending on which courses you choose.
Number of participants	
ECTS	10
Responsible for the activity	Thomas Schrøder (tbs@ruc.dk)
Head of study	Studieleder for Fysik (fys-sl@ruc.dk)
Teachers	
Study administration	INM Registration & Exams (inm-exams@ruc.dk)
Exam code(s)	U60190

ACADEMIC CONTENT

Overall objective To give the student experience in choosing and applying the methods of Scientific Computing and Data Science to new problems and to give the student an overview of methods associated with: - Scientific Computing, i.e., the use of computers and applied math to generate data from models by numerical methods and/or simulation. - Data Science, i.e., the use of computers, models, and applied math to gain insight from data.

The aim of the course is to give the student experience in choosing and applying methods of Scientific Computing and Data Science to (for the student) new problems and to give the student an overview of methods associated with the two subjects:

Detailed description of content

- Scientific Computing, i.e., the use of computers and applied math to generate data from models by numerical methods and/or simulation. In the first mini-project students will work in groups to implement the so-called molecular-dynamics method in Python. This includes the relevant testing and interpretation of results.
- Data Science, i.e., the use of computers, models, and applied math to gain insight from data. In the second mini-project, students will work in groups to apply data science methods to scientific data of their own choice, and report their conclusions in a convincing way.

In the third and final mini-project students groups can choose between the two subjects (Scientific Computing and Data Science) or a combination thereof. If a single subject is chosen, the mini-project must include a discussion of how the other subject could be involved.

Course material and Reading list To be specified on moodle

10 ECTS course

Overall plan and expected work effort

- Reading course material and problem solving at home: 70 hrs
- Discussion and problem solving in class: 30 hrs
- Working on mini-projects at home: 100 hrs

- Working on mini-projects in class: 60 hrs
- Exam preparation: 9 hrs
- Exam: 1 hours

- Total 270 hrs

Format

The course includes formative evaluation based on dialogue between the students and the teacher(s).

Evaluation and feedback Students are expected to provide constructive critique, feedback and viewpoints during the course if it is needed for the course to have better quality. Every other year at the end of the course, there will also be an evaluation through a questionnaire in SurveyXact. The Study Board will handle all evaluations along with any comments from the course responsible teacher.

Furthermore, students can, in accordance with RUCs 'feel free to state your views' strategy through their representatives at the study board, send evaluations, comments or insights from the course to the study board during or after the course.

Programme Theme 1: Scientific Computing. First mini-project: Molecular Dynamics
Theme 2: Data Science. Second mini-project: Application of data science methods to scientific data
Theme 3: Third mini-project: Scientific computing and/or data science

ASSESSMENT

After completing the course the students will be able to

Overall learning outcomes

- demonstrate an overview of methods in Scientific Computing and Data Science.
- choose methods in Scientific Computing and Data Science relevant for a given problem.

- independently learn about methods in Scientific Computing and Data Science on an advanced level.
- apply methods in Scientific Computing and Data Science to a new problem. This includes the relevant programming, testing, and interpretation of results.

Individual oral exam based on a portfolio.

The character limit of the portfolio is 1,200-120,000 characters, including spaces. Examples of written products are exercise responses, talking points for presentations, written feedback, reflections, written assignments. The preparation of the products may be subject to time limits.

Form of examination

The character limits include the cover, table of contents, bibliography, figures and other illustrations, but exclude any appendices.

Time allowed for exam including time used for assessment: 30 minutes. The assessment is an assessment of the oral examination. The written product(s) is not part of the assessment.

Permitted support and preparation materials for the oral exam: All.

Assessment: 7-point grading scale.

Moderation: Internal co-assessor

Form of Re-examination

Samme som ordinær eksamen / same form as ordinary exam

Type of examination in special cases

The students produce a portfolio consisting of 3 mini-projects. All 3 can be handed-in for review by the teacher.

Examination and assessment criteria

At the exam the student makes a presentation of the third mini-project. The presentation may be interrupted by clarifying questions and the presentation will be followed by a discussion and questioning with in the curriculum of the course.

Students will be assessed by their ability to:

- apply methods in Scientific Computing and Data Science to a new problem. This includes the relevant programming, testing, and interpretation of results.
- argue for choosing specific methods in Scientific Computing and Data Science relevant for a given problem.
- demonstrate that they have independently learnt about methods in Scientific Computing and Data Science on an advanced level.

The assessment of the oral exam is based on the student's ability to meet the criteria mentioned above and their ability to

- clearly present and communicate the scientific content of the portfolio
- engage in a scientific dialogue and discussion with the assessor and co assessor

Furthermore, whether the performance meets all formal requirements in regard to both for the written og oral exam
